mSupply ColdChain

1. Getting started with mSupply ColdChain
2. Setting up sensors
3. Application settings

The status bar will display the tablet's battery percentage and current date and time.

A graph displaying temperature logs for the last 72 hours will be displayed for each sensor.

The battery status, name, current temperature, and last log reading will be displayed for each sensor.

If required, this screen can scroll to view more sensors.

Any breach (including battery breach) will be indicated using an icon. Parameters for temperature breaches can be defined in settings.

Sensors is the home tab and will display a vertical graph list of all sensors connected.

The settings tab will take you to the screen to change device and application settings.
