

# Adverse Drug Reaction Reporting

From version 7.1 mSupply mobile includes the ability to report on Adverse Drug Reactions. It is able to be used with AEFI (Adverse Events From Immunisation) reporting.

## Set up

## Entering an adverse reaction report

To report, a patient must be entered. If you are at the facility where the drug was administered, the patient should already be in the system.

If the patient isn't in the list:

1. Tap the **Lookup Patient** button to query the central server to retrieve their name.
2. If you still can't find them (which should be rare), then you can tap **New Patient** to enter their details.

Once the patient is found, tap the **plus** icon in the ADR column to add an adverse event report for that patient.

The screenshot shows the mSupply mobile app interface. At the top, there's a header bar with a back arrow, the title "Dispensing", the mSupply logo, and a sync status message: "SYNC ERROR. LAST SYNC 19.3.2021". Below the header, there are two tabs: "Patients" (selected) and "Prescribers". A search bar contains the text "g, j -d 1989". To the right of the search bar are two buttons: "New patient" and "Lookup patient". Below the search bar is a table with the following columns: CODE, LAST NAME, FIRST NAME, D.O.B, HISTORY, ADR, EDIT, and DISPENSE. The first row of data shows a patient with LAST NAME "Griffin", FIRST NAME "Joshua", and D.O.B "25 Jun 1989". The ADR column for this patient contains a red plus icon, which is the target for adding an adverse reaction report. The rest of the table is empty.

What is shown on the form is configurable on the server. If more than 1 adverse reaction form has been defined, you will be shown a list of forms, and you need to choose the appropriate one before proceeding. If only 1 form has been configured, you will be taken directly to the form to enter the adverse event details.
